

GRAVITY DISPLAYS

The background of the slide is a deep black space filled with numerous small white stars. Two prominent purple nebulae with wispy, ethereal patterns are positioned on the left and right sides. In the lower right quadrant, a portion of a planet is visible, showing a dark blue and black surface with a thin white atmospheric layer. The title 'GRAVITY DISPLAYS' is centered at the top in a white, stylized font with small circular accents above the 'V' and 'I'. Below the title is a dark, horizontal oval shape.

MANUAL

SATURN 200
NEPTUNE 400

Let's begin to levitate.

Please take some time to read all the instructions we propose in this user manual. This levitation module has to be used correctly for a pleasurable experience.

You will find included everything there is to know about safety, warranty, technical assistance, proper use and the limits of this product.

It is our strong advisement to carefully read all the information in this manual before using the product.

Understand that you are accepting all the terms and conditions once you start using the levitation module.

Always keep this manual close for reference.

The shoe stands; Saturn 200 and Neptune 400 are fit for shoes which weigh between 200-650 Gram. The weight can be adjusted.

What's in the box?

1 Base

1 or 2 magnets depending on the model

1 Power Adapter

3 or 6 Adjustment balls

1 User manual

SATURN 200 & NEPTUNE 400 DISPLAY MANUAL

2 SAFETY AND PROTECTION

A. GENERAL WARNINGS

The magnet is very powerful, it may attract nearby metal items or other magnets. For the Neptune 400 there are 2 magnets included, **its very important to keep distance between these 2 magnets**. If they come to close to each other they will attach on to each other. Once that happens the magnets become inseparable.

The product is made for indoor use only and in area's where the ambient temperature is between -5°C and -35°C.

Please keep water away from the product and don't use in wet surroundings. If the product comes in contact with water it will damage the product.

The product base should be placed on a flat surface. Keep away from any surfaces that contain materials that are affected by magnets such as; Iron, Metals and other magnetic objects as they may interfere with the product.

3 Setting up the module

[WATCHING THE VIDEO IS RECOMMENDED WHEN SETTING UP THE MODULE, THE VIDEO CAN BE FOUND ON THE MANUAL PAGE]

- 1) Place the stand on a flat surface.
- 2) Connect the cable to the display and plug the adapter to your outlet.
- 3) Weight the shoe or estimate the weight of the shoe.
- 4) Adjust the weight knob to match the weight of your shoe.
- 5) Put the magnet in the heel, make sure the small end of the magnet which is also marked with 'TOP' is attached to the heel of the shoe.
- 6) Hold the magnet within the shoe and move towards the display. The magnet in the display is about 6 CM from the front of the display. This is the location where you should also locate the magnet in the shoe.
- 7) Hold the shoe about 1.3 CM from the base. If done correctly you should feel the magnetic forces locking the shoe into place. If this is the case release the shoe gently.
- 8) If you feel an upward attracting power, the set weight might be too high or too low. Do a couple of tests by using different weights.
- 9) Adjusting the rotation speed is done by rotating the knob with the fan icon.

IF THE DISPLAY FLOATS – YOU HAVE BECOME A LEVITATION MASTER
